

Certificate

To Whom So Ever It May Concern

This is to confirm that I am highly impressed on the technical superiority of KiTEC Composite Pipes over other available piping materials. After evaluating the features of KiTEC pipes and its fittings, I have initially installed for Hot and Cold internal plumbing line in one of the toilet block of my new bungalow at Booti more, Ranchi.

I have also observed that due to availability of pipes in coils, malleable nature of pipes and compression type fittings, the installation is very easy, convenient and fast without any wastage.

After its satisfactory performance for more than 6 months, I have recommended use of KiTEC pipes in my residential projects for internal plumbing lines and so far the same has been used for 2 projects.

In fact, I have also used KiTEC pipes with its brass fittings in my bungalow for LPG line, following the new generation concept of "Safe Kitchen" where the LPG cylinder is kept away from the kitchen and same is connected to the LPG stove/cooking range through suitable and joint less pipe. This gas line is working satisfactorily for more than a year as of now.

I wish the best for this new piping material, which is suitable for all sort of fluid application.

Thanking you

Yours truly,
