TO WHOM SOEVER IT MAY CONCERN

This is to certify that we have replaced the entire G.I. pipeline of our society, which was meant for bore-well water with KITEC composite pipes and fittings during the period December 1996, The existing G.I. pipeline of 1" diameter was replaced with 0.75" dia of KITEC composite pipes. The installation of KITEC pipe was very fast and the water pressure test found to be improved comparatively. Even after lapse of a period of more than two years, we have found the water flow the same as there is no corrosion at all in this pipe. The performance of this pipe is so far excellent and recommended even to be used in new construction projects as well as for the purpose of replacement.

(R.P.Patley)
