TO WHOMSOEVER IT MAY CONCERN

In July 2001, We replaced the GI pipe used for solar Hot water supply line with Kitec Composite pipes at our Chanakya Boys Hostel. The GI pipes corroded within 8 years leading to leakages there was also a considerable amount of scale forming thus reducing the flow of water. Hot Water is supplied for 3 hours everyday Kitec Pipes, in different diameters, Totalling about 850 feet were used without Insulation. This resulted in considerable amount of cost savings. Also we do not find any loss in temperature.

It is now one year since Kitec Pipes are in use and we are very happy with the functioning of these pipe.
